

CLAIMS

1. A tent ventilation structure, comprising:
a vent window in proximity to a tent floor; and
an awning coupled to a top edge of the vent window configured to extend outward from the tent to a position above the base of the vent window.
2. The tent ventilation structure of claim 1, wherein the awning is arched.
3. The tent ventilation structure of claim 1, wherein the vent window comprises a mesh-type material.
4. The tent ventilation structure of claim 1, wherein a bottom edge of the vent window is less than twelve inches from the tent floor when the tent is assembled.
5. The tent ventilation structure of claim 1, wherein the awning further comprises a flexible outer support member configured to extend the awning outward from the tent and to define an outer upper edge of the awning.
6. The tent ventilation structure of claim 5, wherein the awning further comprises a flexible inner support member configured to define an inner upper edge of the awning.
7. The tent ventilation structure of claim 5, wherein the vent window is arch-shaped.
8. The tent ventilation structure of claim 6, wherein the vent window is arch-shaped.
9. The tent ventilation structure of claim 6, further comprising a hold rod coupled to the awning and extending outward from the tent configured to hold the awning in an extended position away from the tent.

10. The tent ventilation structure of claim 1, wherein length of the vent window is approximately twenty inches and wherein height of the vent window is approximately six inches.
11. The tent ventilation structure of claim 7, wherein length of the vent window is approximately twenty inches and wherein height of the vent window is approximately six inches.
12. The tent ventilation structure of claim 8, wherein length of the vent window is approximately twenty inches and wherein height of the vent window is approximately six inches.
13. A tent ventilation system, comprising:
 - a floor tent vent comprising a vent window in proximity to a tent floor, and an awning coupled to a top edge of the vent window and extending outward from the tent to a position above the base of the vent window; and
 - an opening in proximity to the tent ceiling to create air convection with the floor tent vent.
14. The tent ventilation system of claim 13, wherein the awning is arched.
15. The tent ventilation system of claim 13, wherein the vent window comprises a mesh-type material.
16. The tent ventilation system of claim 13, wherein a bottom edge of the vent window is less than twelve inches from the tent floor when the tent is assembled.
17. The tent ventilation system of claim 15, wherein a bottom edge of the vent window is less than twelve inches from the tent floor when the tent is assembled.
